Student: Sheryians

Task: 1 HTML Documentation

HTML Is Not What You Think It Is

maximize log samajhte hain ke **HTML** sirf web page banane ke liye hoti hai. Lekin reality me HTML sirf text aur images show karne ka tool nahi hai. HTML web ki **structure, meaning, SEO, accessibility, aur performance** define karti hai.

HTML ka matlab hai:

HyperText Markup Language

Ye programming language nahi hai. Isme loops, conditions, ya functions nahi hote. Iska kaam content ko structure aur meaning dena hota hai.

1. HTML Sirf Design Nahi Hoti

HTML page ka skeleton hoti hai.

CSS design karta web page ku.

JavaScript functionality deta hai.

```
<h1>Welcome to Our Company</h1>
<p>We build modern Sheryians WebApplications</p>
<a href="/contact">Contact Us</a>
```

Browser samajhta hai:

- `<h1>` → Main heading
- `<p>` → Paragraph
- `<a>` → Link

Yani HTML browser ko batati hai content kya hai.

2. Semantic HTML Real HTML Hai

Professional developers sirf `<div>` use nahi karte.

Wo semantic tags use karte hain jo content ka meaning batate hain.

```
<header>
  <nav>
    <a href="/">Home</a>
  </nav>
</header>
```

```
<main>
  <article>
    <h1>Our Services</h1>
  </article>
</main>
```

```
<footer>
  <p>Copyright 2026</p>
</footer>
```

Ye tags:

- SEO improve karte hain
- Accessibility better banate hain
- Screen readers ko help karte hain
- Google ko page samajhne me help karte hain

3. Important HTML Tags

Structure Tags

```
<header>  
<nav>  
<main>  
<section>  
<article>  
<footer>
```

Text Tags

```
<strong>Important</strong>  
<em>Emphasis</em>  
<abbr title="Hypertext Markup Language">HTML</abbr>
```

Media Tags

```
<img>  
<video>  
<audio>  
<iframe>  
<svg>
```

List Tags

```
<ul>  
<ol>  
<li>
```

Form Tags

```
<form>  
<input>  
<label>
```

```
<textarea>
<button>
```

4. Meta Tags Invisible But Powerful

Meta tags user ko nazar nahi aate lekin browser aur Google unko read karte hain Bhot zaida powerful hain **Sheriyans** ki tarah.

```
<head>
  <meta charset="UTF-8">
  <meta name="viewport" content="width=device-width, initial-
scale=1.0">

  <title>HTML Masterclass</title>

  <meta name="description"
    content="Learn advanced HTML with SEO and semantic markup">

  <meta name="robots" content="index, follow">
</head>
```

Important Meta Tags

Tag	Purpose
title	SEO title
description	Google description
viewport	Mobile responsiveness
charset	UTF-8 support
robots	Search engine instructions

5. HTML + SEO

SEO sirf keywords ka naam nahi hai.

HTML structure bhi SEO ka part hai.

```
<h1>Main Topic</h1>
```

```
<h2>Sub Topic</h2>
```

```
<h3>Details</h3>
```

Google heading structure se content samajhta hai.

Good HTML:

- Better ranking
- Better accessibility
- Better user experience

6. Accessibility Matters

Professional HTML sab users ke liye hoti hai.

```
<label for="email">Email</label>
```

```
<input type="email" id="email">
```

Images me alt text important hota hai:

```

```

Screen readers alt text read karte hain.

7. Performance & Core Web Vitals

HTML website speed ko affect karti hai.

```

```

```
<script src="app.js" defer></script>
```

Important Metrics:

- CLS → Layout shift
- LCP → Main content loading speed
- FID / INP → User interaction speed

Mostly Developers Use HTML

Beginner HTML:

- Sirf tags yaad karta hai

Professional HTML:

- Structure samajhta hai
- Semantics use karta hai
- SEO optimize karta hai
- Accessibility improve karta hai
- Performance handle karta hai

Isi liye:

“HTML Is Not What You Think It Is”

HTML sirf web pages nahi banati.

HTML web ko samajhne layak banati hai.
